The development of the pharmaceutical chemical world is increasingly transforming, creating new ideas that we use as a reference for new guidelines for developing products.

Sinar Sanskara Ltd. was created as an institution that can realize product development in companies around the world. Focusing on chemical raw materials, we have realized that over the years our products are rare items that are needed by many products. Being one of the leading agricultural producers of the chemical raw material dammar gum, we have many years of experience in tailoring our clients' needs to develop their products.

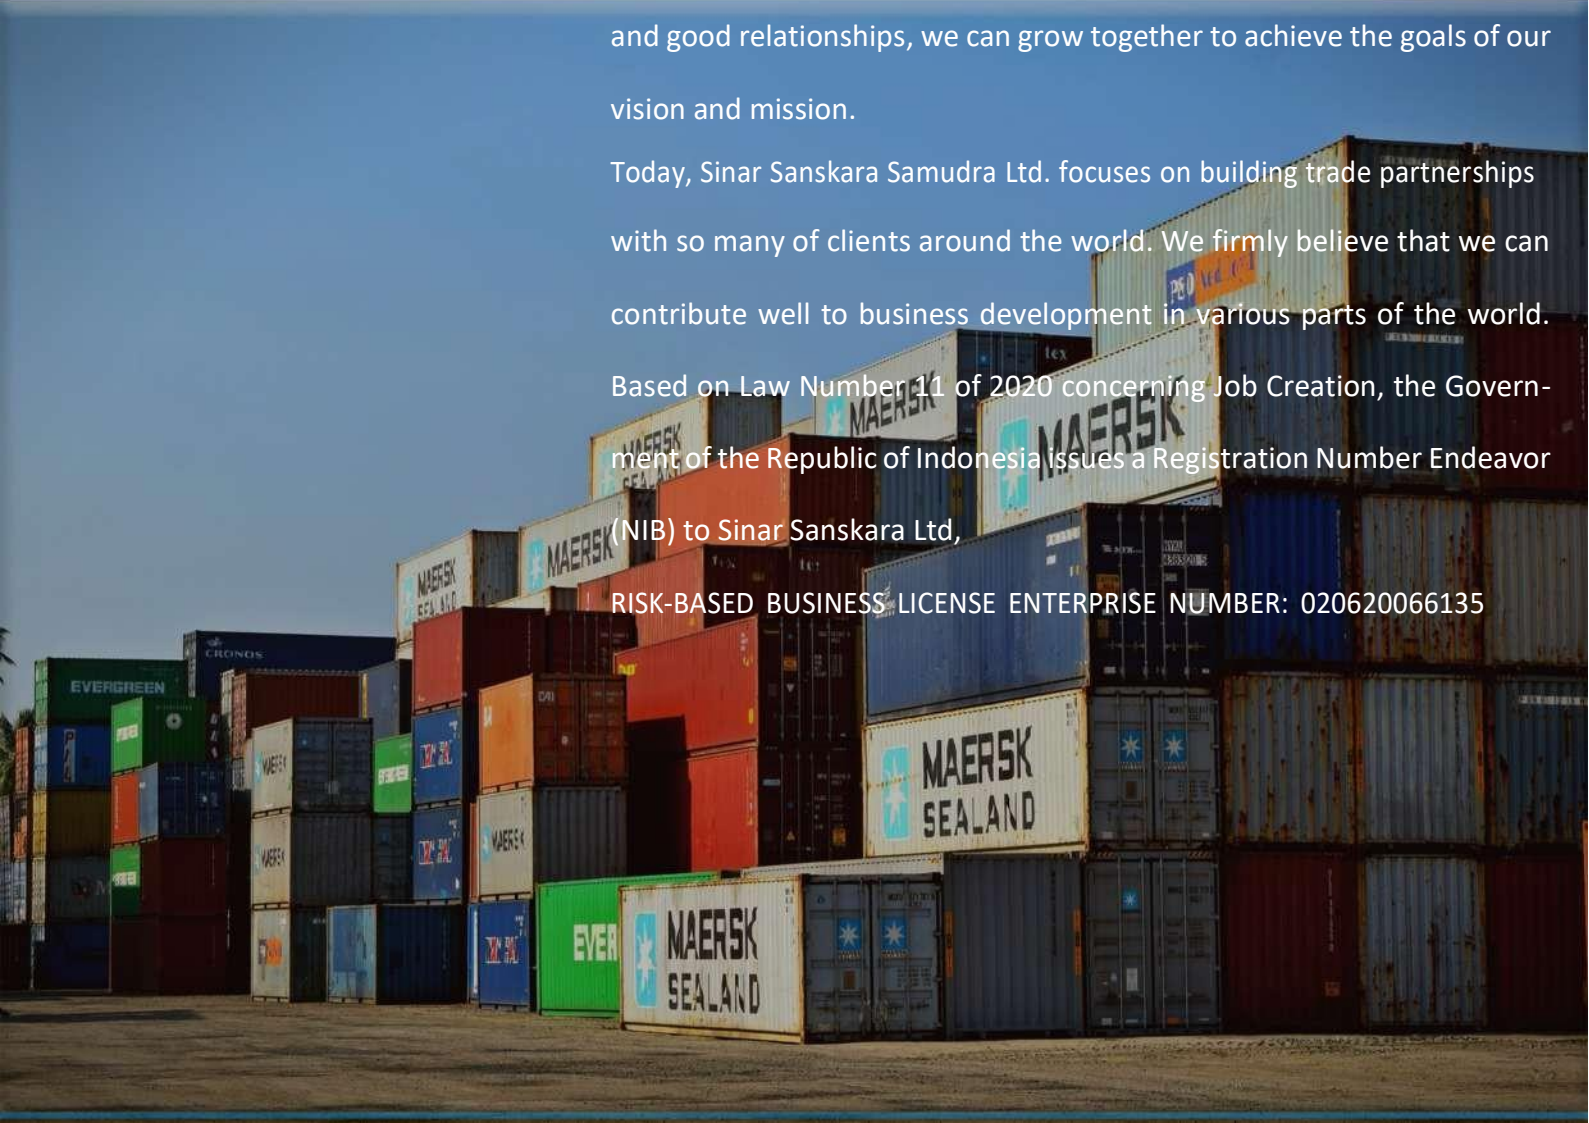

We named our first company with the name Sinar Sanskara, Sinar means light and Sanskara which means ethics/morals in Indonesian Sanskrit. We hope to build a business with ethical values of good manners to reach our various types of clients around the world. We believe that by building trust and good relationships, we can grow together to achieve the goals of our vision and mission.

Today, Sinar Sanskara Samudra Ltd. focuses on building trade partnerships with so many of clients around the world. We firmly believe that we can contribute well to business development in various parts of the world.

Based on Law Number 11 of 2020 concerning Job Creation, the Government of the Republic of Indonesia issues a Registration Number Endeavor (NIB) to Sinar Sanskara Ltd,

RISK-BASED BUSINESS LICENSE ENTERPRISE NUMBER: 020620066135

Who We Are

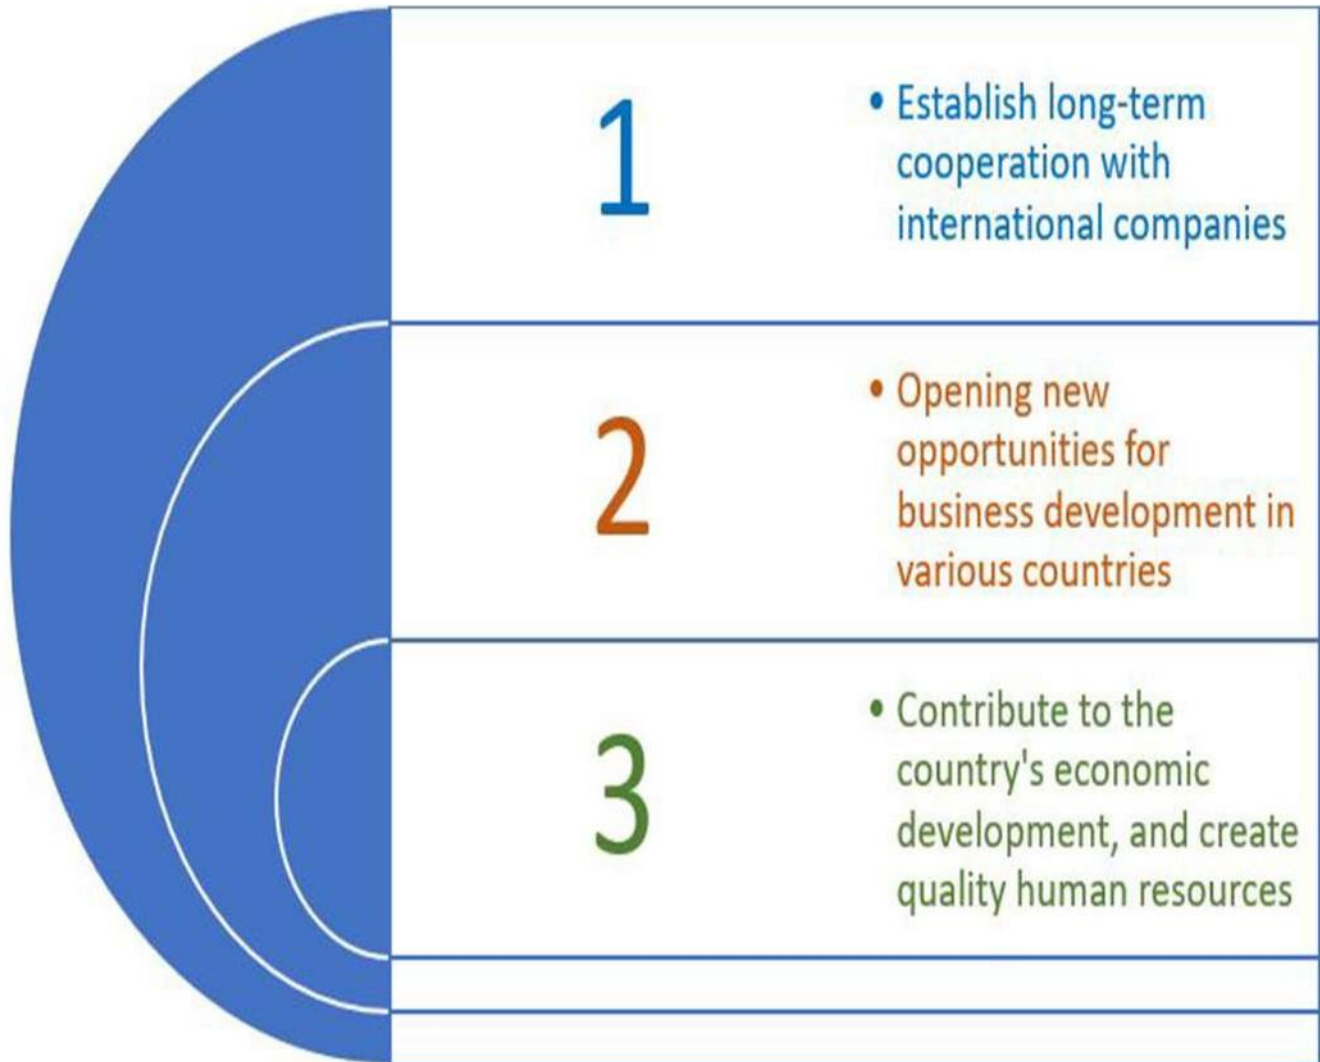

How We Work

By promoting a code of ethics for good corporate governance, we apply absolute values at work, namely the following points:

1. Professional, managed by leaders and workers who have honest criteria, have a fighting spirit, good experience, and are committed to developing the company.
2. Avoiding individual interests, treating all clients equally, not accepting bribes and upholding morality in accordance with good corporate governance.
3. Survive and be confident in being able to compete in the international arena, encourage investment growth, participate in the national economy and build the nation.

Company Goals

Vision and Mision

Vision

Providing the best service, quality products and upholding the ethical standardization of the company's commitments

Opening new networks and new business potential in the international arena

Helping industry players to develop their products based on developing science and technology.

Mision

Building long-term cooperation with industrial companies in various countries by maintaining our work ethic standards, namely professional, persistent, high fighting spirit, honest and able to adapt to business developments.

Why Gum Dammar ?

Tree species *Shorea javanica* is known by various regional names, namely cat's eye resin (South Sumatra) and damar sibolga (North Sumatra). Also known as glass resin. In Indonesia, the species of *S. javanica* is quite abundant. Damar is one of the main sources of income for the people of Indonesia West Coast, there are several advantages of resin compared to commodities. Another thing is that the harvest period can be done at least 30 to 40 days for harvesting get superior quality, but resin resin can also be harvested 1 week.

Lampung Province is one of the regions producing resin resin which is quite large, has a damar forest covering an area of 17500 ha. From this area, 7500 ha of which are community forests managed by various systems cultivation and farming. According to Research of Djajapertjunda and Partadireja Gum damar of the type *S. javanica* is widely produced in the provinces of West Sumatra, North Sumatra, and Riau. The tapping technique that has been applied so far at Krui, the production of damar cat's eye per-tree varies widely, which is between 0.5-4.5 kg/month.

The resin tree begins to be tapped at the age of 20 years or when the diameter of the stem has reached 25-30 cm. Resin tapping is done by how to wound the trunk of a tree in the form of a notch. As for the shape of the notch. Taps are generally in the form of an equilateral triangle with varying sizes from 7.512 cm to a depth of 2-4 cm. The exuded resin is left to flow and collect in the tapping hole until it dries and hardens. After the resin resin dries then the resin is collected. The collection period is usually within a week to a month after tapping.

Uses Of Cat's Eye Resin

Commodities are used, among others, as raw materials for various industries, such as :

1. Rubber Mix

2. Plastic

Plastic is one of the most famous resin products. The resin is used to coat the plastic to make it stronger and more durable. The use of plastic is also rampant everywhere, so today almost everyone has used plastic for their benefit.

3. INK

Ink from resin is also widely used in the industrial sector and is very beautiful compared to using other inks. The resin sap that is processed into ink has the same standard price as the others.

4. LAC

Lac is a hard adhesive from red or black resin, for stamps, seals, and so on. Based on research analysis shows that between oil palm flower briquettes with tapioca flour adhesive and resin resin, there is a large difference, namely the largest calorific value is in the resin resin adhesive mixture. This is because

Uses Of Cat's Eye Resin

Commodities are used, among others, as raw materials for various industries, such as :

5. Varnish and Paint

Varnish (Varnisli) is a liquid whose composition is composed of resin, oil, solvent, pigment, and abrasive.

7. Match

Some parties in the industrial world not only use the damar tree as a raw material for making matches but also use the resin as the raw material for making matches. Resin is used to prevent the fire from burning too quickly.

6. Candle Mix

The main ingredients of candles are gondorukem, cat's eye resin, paraffin (white and yellow), Microwax, animal fat, coconut oil, wasp wax, lancing wax. The more the amount of cat's eye resin, the more flexible the wax will be and

8. Food (Chewing Gum)

Inside the factory, various gums are produced and the mixture is then heated in a large saucepan to combine. Recently, many new basic ingredients have been added such as synthetic materials to improve texture, but they must be declared safe for consumption. The hot mixture is sterilized

Uses Of Cat's Eye Resin

Some applied research showed that resin has the potential to be used as an anti-termite and anti-fungal, muddy and ballast ingredients, essential oils, anti-herpes virus. Overseas cat's eye resin has been widely used as a raw materials for the manufacture of vinyl records, rubber mixtures, water proofing, candy coating to give it a shiny, hard appearance. In addition, it can also be used as a mixture of nail polish, and Currently, it has received food and drug administration recognition in America South.

Cats Eye Resin Trade

The five largest resin importing countries from Indonesia are India, Singapore, Bangladesh, China, and Taiwan. The export volume 2006 for each country is 6104.5 tons, 1351,4 ton, 636.4 ton, 611, 2 ton and 468.0 the price is determined based on market mechanism.

Why Choose us ?

The purification process generally uses organic solvents. The drawback of this method is that the chemicals from the solvent are still contained in the resin, while for some purposes this content is not allowed. The growing use of cat's eye resin in the cosmetic and food industries makes the market demand for pure organic solvent-free resins increase. Therefore, it is necessary to purify the damar without a solvent, namely by heating. This method in principle changes the shape of the resin with the help of heat until it melts, when it melts the resin is filtered so that pure cat's eye resin is obtained.

1. Our products do not use solvents to make the color of the gum resin clear.
2. 100% separation and collection technique without machine intervention. So that the purity of Gum Dammar is maintained and not damaged.
3. The process of eliminating the quality of Gum Dammar is carried out by direct farmers who have decades of experience
4. Best price and very competitive
5. The work can be directly supervised by the company's envoy who will do the import
